

September 2009

Maintenance teams responsible for multiple building sites are already making plans for the winter of 09/10 and Safe Roof Systems has the technology available today to reduce risk and increase efficiency.

Marlborough, MA

Jeff Canty and Chris Collings from **SRS** attended the annual Northeast Snow & Ice Control Expo in Marlborough MA. The venue is the Royal Plaza Trade Center and the show is well timed by giving attendees the opportunity to include products and services from the show in their winter plans. If you have not included this show on your "must do" list already, make a point to add it to your calendar for next year. See www.advancedexpos.com for an updated event schedule.

"Our system also is used to provide specialized monitoring solutions" - says Chris. SRS is currently designing a system to measure and alarm for the varying loads created by ceiling hung conveyor systems. The SRS Infra Red Monitoring technology is used in a wide range of applications. Contact Safe Roof Systems on 887-736-8325, or visit www.saferoofsystems.com for more information.

Predictions of above average precipitation and record snow fall are part of the annual right of every weather forecaster, but the winter of 09/10 is expected to bring lots of weather. Finding ways to monitor multiple sites as efficiently as possible is a priority. Knowing when and where to respond saves time, money and lives.

"reliable ways to cover more building sites...with the same crews is a major issue"

Steve Wood, Sentec Inc

Chris is working with maintenance supervisors and facilities managers around the country that need to cover more with the same or fewer crews. Contact SRS today to arrange for your no-cost review and site assessment,

Safe Roof Systems annual maintenance service extends the value of monitoring large roof systems. It's a fact that many roof failures are the ultimate conclusion to a developing, long term problem. Our Invisible IR monitoring technology measures for roof deck displacement 24-7-365. Data from the intelligent control panel can point to roof sections that require attention, and alerts crews when action is needed. Regularly scheduled certified inspections and service is an insurance industry recommendation.
